

Kelverion

Integration Pack for Cisco Application Networking Manager (ANM)

Automation for Network Provision and Change

The Kelverion Integration Pack for Cisco Application Networking Manager (ANM) is a compliant integration for Microsoft System Center 2012 R2 Orchestrator or System Center 2016 Orchestrator.

The Integration Pack supports Cisco Application Networking Manager 5.2.

It provides pre-defined integration and automation capabilities associated with network provision extending capability of System Center in the Data Center.

The Integration Pack delivers a range of re-usable objects to automate IT-Functions such as:

Network Provision - Automate the provisioning of the data center virtual network as a seamless part of the server provisioning and management process.

Network Configuration Control – Delegate provisioning outside the network team while the network team maintain control of the process.

IP FOR CISCO ANM ACTIVITIES

Activate Object	Activate an existing virtual server, server farm real server or DNS rule
Add Real Sever to Server Farm	Add a real server to an existing server farm
Change Weight	Change the Weight of an existing farm real server
Create Checkpoint	Create Checkpoint on a specified device
Delete Checkpoint	Delete a Checkpoint on a specified device
