Kelverion
Runbook Studio

Automate IT

A complete solution to automate your IT processes, hosted in Microsoft Azure

The Kelverion Runbook Studio integrates and orchestrates third party systems to automate the day-to-day manual processes, which hinder and delay IT and Support Desk teams.

The Runbook Studio provides an intuitive drag and drop low-code/no-code editor to visually build runbooks and includes integrations for 800+ enterprise management and Service Desk tools and a library of runbooks to automate common use cases, providing a framework to automate any manual process.

Automate IT Service Requests

The Studio includes over 50 automation runbooks;

- Employee onboarding/offboarding
- Standard IT Tasks
- Office 365 Management
- Event to Service Desk Incident Ticket
- Remote Diagnostics & Remediation

Optional solutions are available for:

- Virtual Machine Provision & Management
- Automated Patching

Systems Integration

The Studio provides 800+ integrations to other enterprise systems such as;

- Microsoft Azure
- Amazon Web Services
- Google Cloud
- Azure Dev Ops
- SQL Server & Oracle

- Atlassian Jira
- ServiceNow
- EasyVista
- BMC Helix ITSM
- VMware vSphere

Discover High Return on Investment

Our easy to use Automation Value Calculator enables an organisation to see how much can be saved through automation. Many of Kelverion's customers have achieved in excess of 400% ROI.

Reduce Process Cycle Time & Decrease Errors

Tasks no longer need to wait for different teams to perform manual actions, therefore increasing agility and eliminating bottlenecks. Automation performs a task the same way every time, which unlike manual fulfilment, reduces the risk of human error within your infrastructure.

The Kelverion Runbook Studio enhances the Microsoft Azure Automation service, providing:

- A rich graphical design experience
- Extensive GIT version and release management support
- Multiple automation account and subscription visibility
- Kelverion Smart integrations.

It can be complemented with an easy-to-configure self-service Automation Portal pre-configured to trigger the included use cases.

The Runbook Studio is subscription-based and starts at $1,095 (£895) per month for 2 clients plus the Microsoft Azure cost of 0.2 cents per minute to execute the automated process. To put this in perspective, if the process ran continuously 24/7, the Azure execution cost would be $90 per month.
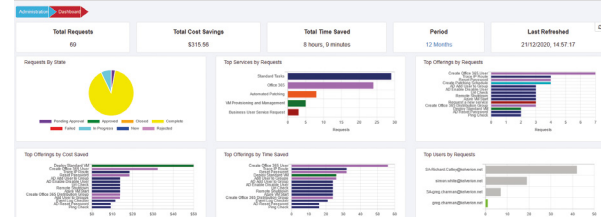

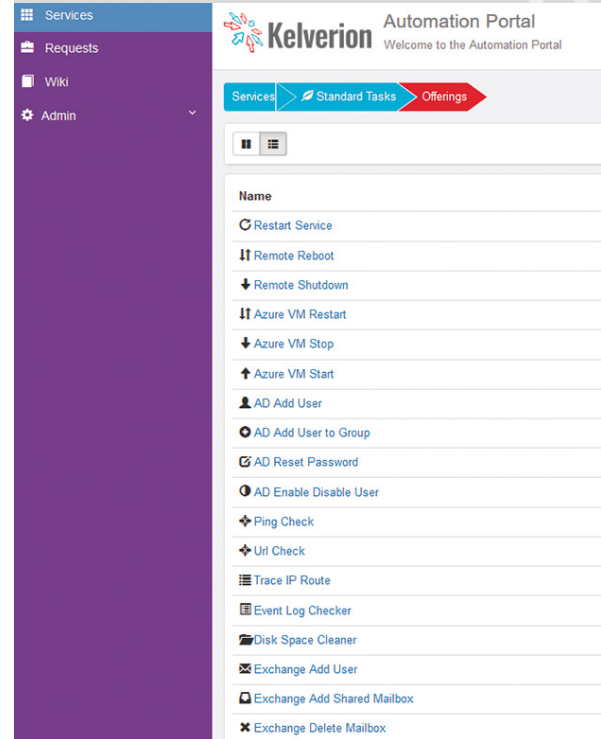

Runbook Studio Benefits

- Free up IT resources
- Empower coder and non-coder team members
- Cost savings
- Significantly reduce process cycle time
- Removes process lags/delays
- Increase compliance
