Integration Module for Slack

Slack Communication Integration for Azure Automation

The Integration Module for Slack provides a set of ready built activities for integrating with the Slack communication service from within Azure Automation and the Kelverion Runbook Studio. These are forms driven activities which allow you to define interactions with Slack without having to write any PowerShell code.

When the Integration Module is used from within the Runbook Studio you also get the benefit of the Smart Discovery. You create a Smart Connection to a Slack Instances and the IM will query the Slack for Channels and Users and then allow you to pass this information to be able to send and process Slack Messages.

The Integration Module allows you to automate some key Service Request use cases:

Service Desk Integration

Automate Slack Notification messages into Incident Ticket creation, in multiple Service Desks, when an Ticket is generated. Update Incident Tickets with responses to Slack messages.

Monitor Messages

Monitor for new messages to trigger automated responses to Slack notifications.

IM FOR SLACK ACTIVITIES

```
Kelverion.Slack
Close-SlackChannel
Close-SlackDirectMessage
Get-SlackChannel
Get-SlackChannelHistory
Get-SlackMessage
Get-SlackMessageThread
Get-SlackTeam
Get-SlackUser
Get-SlackUserGroup
New-SlackChannel
Open-SlackDirectMessage
Remove-SlackMessage
Send-SlackEphemeralMessage
Send-SlackMessage
Send-SlackScheduledMessage
Set-SlackMessage
```
