Kelverion

Integration Pack for OAuth Email

Integration and Automation for Email

The Kelverion Integration Pack for OAuth Email is a compliant integration for Microsoft System Center Orchestrator.

Orchestrator only has native support for on-premise Microsoft Exchange Email systems. Therefore companies without an Exchange infrastructure cannot add email send and respond functions into their automated processes.

This integration pack supports sending and receiving email for Microsoft 365 (Office 365) Exchange Online with OAuth 2.0 enabled.

It also enables Orchestrator to Send, Receive and manage Email messages via IMAP and SMTP. Thus customers with no Exchange Email systems such as IBM (Lotus) Notes, Google Mail etc. can now leverage Email as part of an automated IT process.

The Integration Pack enables users to send, retrieve and monitor email messages. The Integration Pack works with SMTP servers (outgoing email) and IMAP servers (incoming email).

This Integration Pack delivers a range of re-usable Activities to automate IT Functions such as:

- Including Microsoft 365 OAuth, IMAP and SMTP Email communication into Service Desk processing enabling operator free exchange of data and improved data quality

- The ability to include emails received via Microsoft 365 OAuth, or IMAP streams to initiate Orchestrator Runbooks to transform and populate email data into systems such as Event Management Systems and Service Desks

Kelverion are an established Independent Software Vendor specialising in IT Automation solutions. Kelverion provides software and specialist consultancy solutions for Microsoft Azure and the Microsoft System Center suite.
