INTEGRATION PACK FOR EMAIL

For Microsoft System Center Orchestrator

Release Notes

Version 1.4

December 2023

Introduction

The *Kelverion Integration Pack for Email* is an add-on for *Microsoft System Center Orchestrator* that enables you to send, retrieve and monitor email messages. The IP works with SMTP servers (outgoing email) and POP3 or IMAP servers (incoming email). The integration pack provides the following email activities:

- Delete Email
- Empty Mailbox
- Get Email
- Get Email List
- Get Mailbox Info
- Get Mailbox List
- Monitor Email
- Move Email
- Send Email

System Requirements

The Kelverion Integration Pack for Email requires the following software to be installed and configured prior to deploying the integration. For more information about installing and configuring Orchestrator and the SQL Server, refer to the respective product documentation.

- Microsoft System Center Orchestrator 2016, 2019
- Microsoft .NET Framework 4.6.2

The Integration Pack also requires access to the following type of email servers:

- SMTP email server for sending email.
- POP3 or IMAP server for retrieving or monitoring email.

The Integration Pack for Email should be compatible with any email service that implements standard SMTP, POP3 and IMAP specifications and uses basic authentication. This version of the Integration Pack for Email does not support OAuth 2.0. For email services that require OAuth 2.0 authentication, such as Microsoft Exchange, you can use the **Kelverion Integration Pack for OAuth Email**.

Registering and Deploying the Integration Pack

After you download the integration pack, you register the integration pack file with the Orchestrator management server, and then deploy it to runbook servers and computers that have the Runbook Designer installed.

To register the integration pack:
1. On the management server, copy the **.OIP** file for the integration pack to a local hard drive or network share.
2. Confirm that the file is not set to **Read Only** to prevent unregistering the integration pack later.

3. Start the **Deployment Manager**.

4. In the navigation pane of the Deployment Manager, expand **Orchestrator Management Server**, right-click **Integration Packs** to select **Register IP with the Orchestrator Management Server**. The **Integration Pack Registration Wizard** opens.

5. Click **Next**.

6. In the **Select Integration Packs or Hotfixes** dialog box, click **Add**.

7. Locate the **.OIP** file that you copied locally from step 1, click **Open** and then click **Next**.

8. In the **Completing the Integration Pack Wizard** dialog box, click **Finish**.

9. On the **End User Agreement** dialog box, read the Kelverion License Terms**,** and then click **Accept**.

10. The **Log Entries** pane displays a confirmation message when the integration pack is successfully registered.

To deploy the integration pack:

1. In the navigation pane of the **Deployment Manager**, right-click **Integration Packs**, click **Deploy IP to Runbook Server or Runbook**.

2. Select the integration pack that you want to deploy, and then click **Next**.

3. Enter the name of the runbook server or computers with the Runbook Designer installed, on which you want to deploy the integration pack, click **Add**, and then click **Next**.

4. Continue to add additional runbook servers and computers running the Runbook Designer, on which you want to deploy the integration pack. Click **Next**.

5. In the **Installation Options** dialog box configure the following settings.

6. To choose a time to deploy the integration pack, select the **Schedule installation** check box, and then select the time and date from the **Perform installation** list.

7. Click one of the following:

    a. **Stop all running runbooks before installing the integration pack** to stop all running runbooks before deploying the integration pack.

    b. **Install the Integration Packs without stopping the running Runbooks** to install the integration pack without stopping any running runbooks.

8. Click **Next**.

9. In the **Completing Integration Pack Deployment Wizard** dialog box, Click **Finish**.

10. When the integration pack is deployed, the **Log Entries** pane displays a confirmation message.

11. For more information about how to install integration packs, see the How to Install an Integration Pack (https://technet.microsoft.com/en-us/library/hh420346.aspx).

Change History

Version 1.4

- Updated licensing terms.

Version 1.3

- Added support for TLS 1.2
- New end user license agreement.
- Added new optional property As Plain Text in Get Email activity for specifying that the message body should be published as plain text.
- Added new optional property Additional Attachments in Send Email activity for specifying a semicolon (;) separated list of attachment paths.

Version 1.2

- Kelverion.Management.dll update.
- New end user license agreement.

Version 1.1

- General update to improve logging and diagnostics.

Version 1.01

- Kelverion.Management.dll update.

Version 1.0

- Initial release.
