Automating Infrastructure Management

## Kelverion Training Services

### Overview

IT Process Automation is a new subject to many IT Professionals and using ITPA tools is not just as easy as install them and then learn on the job. Each ITPA tool is fully customizable to support the business process you wish to implement so they largely start as a blank sheet of paper.

To help IT Professionals learn the tools Kelverion provide a range of training courses and we can offer bespoke training offering based around specific customer requirements.

Kelverion are also very aware that a training course is only as good as the skills and experience of the trainer in using the tool in the real world. This is why all our training courses are delivered by our Professional Services staff, who can not only tell you how the tool works but also bring real world examples into our training courses.

We offer both on-site and web based training courses so you can tailor your training to your own business needs.

### Orchestrator On Site Training

The Kelverion Orchestrator Training Course provides an on-site 2 day training course on implementing Orchestrator and using the Runbook designer to build your own Runbooks. This is an instructor led course with lab exercises.

No. of Attendees	8 max
Course aimed at	Anyone who will be creating and building workflows and Runbooks in Orchestrator.
Attendee Skill Set	Experience with standard computing systems including file storage, networking and internet technologies. A general knowledge of Microsoft Core Technologies. Working knowledge of databases
Course Synopsis	Each progressive module builds on the previous module, every aspect of Orchestrator needed to create a Runbook is covered. Students will be able to create, analyse and modify Runbooks.
