Integration Pack for Runbook Management

Self Administration for System Center Orchestrator

The Integration Pack for Runbook Management is compliant with Microsoft System Center 2012 R2 Orchestrator or System Center 2016 Orchestrator.

The Integration Pack provides Orchestrator with the ability to manage itself.

When developing Orchestrator solutions a developer usually encounters a number of challenges when trying to meet specific service level agreement goals:

Safeguard the automation solution's running state
The consequences of a unintentionally Runbook stopping can be costly and skew the measure of the 'real effectiveness' of the Runbook.

Automatic recovery of a solution
An implementation requires the ability to automate the restart of a Runbook.

Automated, commanded stop or start of Runbooks
A Runbook or multiple Runbooks need to be stopped or started, for a given scenario.

Resolving these Management challenges is extremely difficult using Systems Center Orchestrator.

The Runbook Management IP Pack provides the answer to achieving these goals effectively. It uses Orchestrator activities without the need of external scripts. It provides the means to easily retrieve the status of Runbook jobs as well as to stop and start Runbooks themselves. The Activities are user friendly, Runbooks are addressed by name instead of GUID's for example.

IP FOR RUNBOOK MANAGEMENT ACTIVITIES

Activity	Description
Get Events	Retrieve event information from the Orchestrator Event Log
Get Runbooks	Retrieve information about Runbooks using the defined filter
Get Runbook Jobs	Retrieve job information, such as Job ID and Job Status, using the defined filter criteria
Start Runbook	Start a Runbook
Stop Runbook	Stop a specified Runbook job
Monitor Events	Monitor Orchestrator events using the defined criteria

Kelverion are a Microsoft System Center and Cloud Partner who offer Integration Packs and Tools to enhance System Center Orchestrator and Azure Automation and deliver System Center implementation services.
