Integration Module for Data Manipulation

Migrating Data Manipulation from Orchestrator to Azure Automation

The Kelverion Integration Module for Data Manipulation has been designed to enable users to easily manipulate input data or compose output data to / from Azure Published Data.

This Integration Module provides the perfect link for those that are currently using our Orchestrator Data Manipulation Integration Pack as they convert their automation from on-premise to a cloud based solution.

The Orchestrator Integration Pack for Data manipulation enables users to easily parse, manipulate input data or compose output data to and from an Orchestrator Published Databus in XML, CSV or JSON formats by using configuration files which told Orchestrator how to decompose or compose the source data.

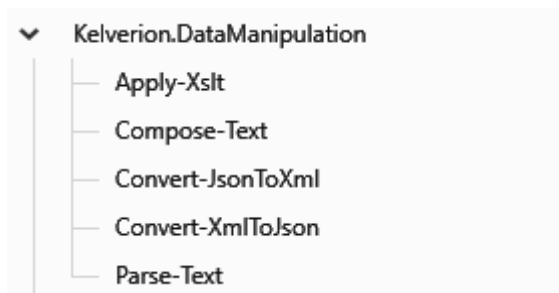

Orchestrator workflow designers will have created a wealth of existing configuration files to convert their input and output data. When they come to move their existing automation flows to Azure Automation they would normally be faced with rebuilding these data conversions using native PowerShell functionality.

This Integration Module converts the existing Orchestrator manipulation config files directly into PowerShell for use within Azure Automation in a set of activities that not only provide the capability to parse

IM FOR DATA MANIPULATION ACTIVITIES

Apply-XSLT	Apply an XSLT to convert one XML format into another
Compose-Text	Create XML, HTML or Text structures from specified inputs
Convert-XMLToJSON	Convert XML formatted text into JSON
Convert-JSONToXML	Convert JSON formatted text into XML
Parse-Text	Parse XML, HTML or Text structures to publish the parsed information onto the databus

manipulate and compose detailed textual information but also to present this data as individual items on the published Azure Automation Databus. The Activities have the ability to be inserted into any workflow and integrate seamlessly with the Azure Automation data bus.

Kelverion are a Microsoft System Center and Cloud Partner who offer Integration Packs and Tools to enhance System Center Orchestrator and Azure Automation and deliver implementation services.
