Kelverion Runbook Surveyor

Automatic Documentation for Orchestrator Runbooks

The Kelverion Runbook Surveyor Application is a compliant utility for the Microsoft System Center 2012 R2 Orchestrator or System Center 2016 Orchestrator products.
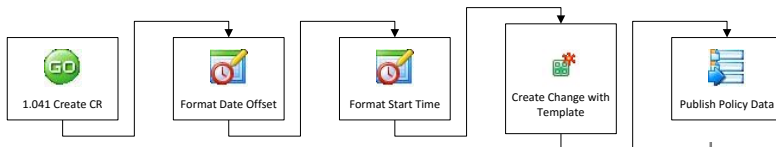

Documentation of Orchestrator Runbooks is usually part of the development cycle. This typically involves taking screenshots of the Runbooks created and then recording their configuration.

This utility enables users to document their solution directly from Orchestrator environment. Runbook Surveyor automatically produces a series of Visio Diagrams and a Word Document detailing complete Runbook applications and their configurations.

These outputs diagram and document all your runbooks and show you how each one is configured and connected to other runbooks.
